Cell Structure and Function: Instructions to Authors

(As of June 29, 2015)

Cell Structure and Function is the official online journal of the Japan Society for Cell Biology, which electronically publishes papers related to molecular and cell biology at: http://www.jstage.jst.go.jp/browse/csf. All manuscripts must be written in English. Scientists from any country may submit papers, irrespective of whether they are members of the Japan Society for Cell Biology. Five types of papers are published: (a) full articles, (b) short communications, (c) mini-reviews and reviews, (d) technical notes, and (e) perspectives. Papers from all categories can be submitted individually and are subject to peer review processes. Full articles and short communications are regarded as original papers and their contents should not have been published elsewhere. Manuscripts should be written in clear grammatically correct English. Author(s) whose native language is not English is/are strongly recommended to have the manuscript checked by a native English speaker prior to submission. If the contents of the manuscript are not understandable because of poor English quality, the manuscript will be returned to the author(s) without subjecting it to the peer review process. The paperbound form of the journal is also available for libraries.

HOW TO SUBMIT MANUSCRIPTS
Submit a PDF or MS Word format file of the manuscript from the online submission web page: http://mc.manuscriptcentral.com/csf. Figures can be submitted separately from the same website in several other formats. If there are any problems with online submission, please contact the editorial office at the following address:

The Editorial Office (as of January 2015)
Editor-in-Chief Dr. Hiroshi OHNO
Laboratory for Intestinal Ecosystem
RIKEN Center for Integrative Medical Sciences
1-7-22 Suehiro, Tsurumi, Yokohama, Kanagawa 230-0045, JAPAN
TEL: +81-45-503-7032 FAX: +81-45-503-7068
E-mail: csf[at]jacos.com (Please replace [at] with @)

REVIEW AND REVISION OF MANUSCRIPTS
The Editor-in-Chief allocates the handling of the submitted manuscript to one of the Associate Editors who acts as the Monitoring Editor. The Monitoring Editor then selects two appropriate referees to review the manuscript. If requested, a revised manuscript should be submitted within two months, otherwise it will be treated as a new submission.

HOW TO PREPARE MANUSCRIPTS AS ORIGINAL PAPERS
Full Articles
Style:
Manuscripts should be prepared in PDF or MS Word format with double line-spacing throughout, with liberal margins of at least 3 cm. Each manuscript must comprise: Title, Authors, Affiliations, Key words, Running title, Footnotes including abbreviations, Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgments, References, Tables, Figure Legends, and Figures (including photographs). The first page of each manuscript should contain: Title, Authors’ full names, Affiliations, Key words, Running title, and the name and full address (including telephone number, facsimile number, and e-mail address) of the corresponding author.

Title Page:
The title should describe the content of the article briefly but clearly. Do not use the same main title with numbered minor titles, even for a series of papers by the same authors. Do not use abbreviations in the title, except those used generally in related fields. The title should not exceed 100 characters, including spaces.

Authors:
Provide the full names of the author(s).
Affiliations:
Provide full names of institutions (Laboratory, Department, Institute and/or University). The addresses of the institutions should be given. When authors belong to different institutions, their respective addresses should be indicated by superscript numbers. When authors have new addresses, they should be given in a footnote and should be indicated by superscript symbols (such as * and **).

Key Words:
A maximum of five key words should be provided.

Running Title:
The running title should not exceed 50 characters, including spaces.

Footnote Page:
Footnotes should be typed in a separate sheet (the second page of the manuscript), if any. Abbreviations should also be listed on this page.

Abbreviations:
Each abbreviation should be defined in the text in parentheses together with its non-abbreviated term when it appears in the text (except in the title and abstract) for the first time. Popular abbreviations can be used without any explanation, which include ATP (NTP), ADP (NDP), AMP (NMP), cAMP, DNA, RNA, mRNA, tRNA, rRNA, DEAE, EDTA, and SDS.

Abstract:
The abstract should clearly express the basic content of the paper within 250 words, including the problem addressed, experimental approach, main results and findings, and conclusions. Avoid using specific abbreviations in the abstract. If it is essential to refer to a previous publication(s), it can be cited in the abstract, but the article title must be omitted, e.g., Maekawa, S., Endo, S., and Sakai, H. (1989). Cell Struct. Funct., 14: 249–259. The abstract should be typed in a separate sheet (the third page of the manuscript when footnotes are used or the second page when footnotes are not used).

Introduction:
The introduction should provide sufficient background information to allow the reader to understand the purpose of the investigation and its relationship with other research in related fields, although it should not include an extensive review of the literature.

Materials and Methods:
The description of the methods should be brief, but it must include sufficient details to allow the experiments to be repeated. The sources of unusual chemicals, animals, microbial strains, or equipment should be described. The location (City, Nation) of the company should be provided in parentheses. If hazardous materials and dangerous procedures are used in the experiments and the precautions related to their handling are not widely recognized, it is recommended that the authors provide the necessary details. On behalf of the Japan Society for Cell Biology, the editorial board of the journal recommends that experiments performed using materials derived from human sources are performed in accordance with the principles embodied in the Declaration of Helsinki, and that experiments conducted using animals and materials prepared from animals are performed according to guidelines approved by the authors’ institution(s).

Results:
This section includes the results of the experiments. The results and discussion sections may be combined if this helps readers to understand and evaluate the study better. Tables and figures, including photographs, can be used to present the experimental results (see below). Excessive explanations of the data presented in tables and figures should be avoided.

Discussion:
The discussion should be concise and should deal with the interpretation of the results. Novel models or hypotheses may be proposed in this section only if they are suggested by the results obtained in the experiments.
Do not repeat the description of the experimental results in this section.

Acknowledgments:
This section should be brief.

References:
All the publications cited in the manuscript should be listed alphabetically according to the first author. When two or more publications are cited in the text by the same first author, they should be listed chronologically. References are cited in the text by surname and year within parentheses, e.g., (Tuma et al., 1999; Hurd and Saxton, 1998). Research that has been “submitted for publication” or that is “in preparation” may be cited in the text by adding the appropriate phrase in parentheses. Meeting abstracts must not be cited in the References; however, they may be cited in the text by indicating the publication abstract, page, and year. Oral presentations without published abstracts and personal communications must not be cited. An “in press” paper may be included in references if the paper is expected to be published during the processing of the manuscript for publication in *Cell Structure and Function*. In this case, the authors may be required to send three copies of the preprint to the editorial office to facilitate the review process. Journal abbreviations should follow the system used in the Serial Sources for the Biosis Database (published by BioSciences Information Service of Biological Abstracts, 2100 Arch Street, Philadelphia, PA 19103, USA). Examples of reference citations are as follows:

HOW TO PREPARE TABLES AND ILLUSTRATIONS

Tables:
Number tables consecutively using Roman numerals (I, II, III, IV, etc.). A title should be given to each table and it must use capital letters. Explanatory material and footnotes should be typed below the table and should be designated with superscript alphabets, such as a) or b). Units of measurement should be included with numerical values at the top of columns. Avoid detailed explanations of the experimental conditions used to obtain the data shown in tables (which should be included in the Materials and Methods section).

Figures:
Figures include line drawings and photographs. Single-column figures must not exceed 84 × 220 mm. Double-column figures must not exceed 173 × 220 mm. Magnifications of photographs should be indicated in the legends and/or by scales included in the photographs. Illustrations must be self-explanatory and they should be numbered consecutively with Arabic numerals (i.e., Fig. 1, Fig. 2, etc.). Each figure should have a short title. Figure legends should be typed in a separate sheet(s). Figure legends should include sufficient experimental details to make the figures intelligible; however, duplicating the descriptions provided in the Materials and Methods section should be avoided.

SHORT COMMUNICATIONS
Follow the instructions for full articles, except the total word count of the main text (excluding references, tables, and figure legends) is limited to 2000 words. An abstract of no more than 200 words is required but other sections (Introduction, Materials and Methods, Results, Discussion, and Acknowledgments) can be combined as appropriate.

OTHER CATEGORIES OF MANUSCRIPTS
Reviews and Mini-reviews
Technical Notes
Perspectives

PROOFS AND OFFPRINTS
Page proofs are sent to the corresponding author indicated on the first page of the manuscript by the printer. The author must return the proof to the printer’s office within 2 days.

PUBLICATION FEE
To provide open access, expenses are offset by a publication fee of ¥100,000, which will allow CSF to support itself in a fully sustainable manner.

COPYRIGHT
Copyright of articles printed in the Cell Structure and Function belongs to the Japan Society for Cell Biology.
